1. Claims 35-46 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 35 has been amended so that line 6 contains only the language "radiation" and this requires correction. Also, due to the amendment, the recitation of "the base film" at line 10 of claim 35 now lacks antecedent basis.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 35-55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martens in view of Japanese document 8-137,375 for reasons of record.

3. Applicant's arguments filed November 16, 2006 have been fully considered but they are not persuasive. Applicant submits that the prior art does not teach mold patterning and patterning using a mask simultaneously. This is true. However, it is also true that the primary reference discloses the instant invention lacking merely the use of a mask. Japanese -375 shows using a mask through which radiation is directed and whereby an already molded material—which, by the way, would also be true of Martens and the instant—is patterned with the mask. While Japanese -375 may not do so in a continuous manner, the primary reference shows continuous processing and one of ordinary skill in the art would have been surely able to modify a batch process to a continuous one. Rollers are a conventional way by which films and sheets are

processed in a continuous manner. Also, such are generally taught by Martens—see Figure 9 therein. It is respectfully submitted that it is not germane to the rejection that Japanese –375 does not radiate through the mold—certainly the instant claims do not even require this. Again, the main aspects of the instant invention are met by Martens, with Japanese –375 merely being relied upon to show employing a mask to pattern a radiation curable material. It is also respectfully submitted that no declaration or affidavit is required on the examiner's part. The references have been reasonably combined and are submitted to reasonably teach the instant invention.

4THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
